Re: Gulf of Mexico Communication Issues

We have received two separate notices that affect our offshore data collection system in the Gulf of Mexico and can potentially impact our Gulf of Mexico Measurement operations.

STRATOS, our service provider in the gulf, informed ANR that they would be relocating two microwave sites; South Marsh Island (SMI) 130 and Eugene Island (EI) 331. The relocation directly affects our collection of Measurement data at SMI130.

Additionally, we received notification that the owner of EI42 is planning to unman the platform and shut down the power generation facilities hence no power to the tower facilities disabling our Measurement collection process.

ANR will be manually collecting the measurement data on a weekly basis until these issues are resolved. We will post daily estimates and then update those estimates as the data is retrieved.

We are working diligently to resolve these issues. Below is a listing of the meters that are affected. Please contact the following individuals if you have questions concerning this notice.

Jason Green or Larry Dick at 832.320.5660 – Data Integrity Hotline
Roy Hidlebaugh at 832.320.5425 - Manager of Measurement Services
